# FACIAL DETECTION

With our new Facial Detection technology your surveillance system can now accurately detect human faces to trigger recording and alerts. This feature can be used with or to replace motion alerts to decrease false motions alerts with more accurate facial detection.

# LINE CROSSING DETECTION

The Line Crossing feature allows you to draw a virtual line between any two points in any direction. When the line is crossed the cameras will automatically detect the event, trigger alarms, recordings and/or smart phone notifications. Rules can be customized on the Line Crossing feature to alert on movement that crosses the line, left to right, right to left, up to down, down to up or all.

# INTRUSION DETECTION

---

Intrusion detection is a behavior analysis function that detects if a person enters and loiters in a pre-defined custom virtual region and time. The camera will automatically detect the event, trigger alarms, recordings and/or smart phone alert notifications. By applying the latest algorithm, the intruders dimension ratio is automatically analyzed to reduce false alarms and alerts.

The smart detection features are extremely beneficial for protection of a defined area, reducing false motions and alarms. As well as increasing storage time, while reducing the amount of time it takes to find and export video.

Intrusion detection
